

Site Audit

Enhance your editor experience with consultancy services

Range of service

Site Audits provide a deep analysis and recommendation report on how to improve active or planned projects.

Service features

- Various depths of audits.
- Reports tailored to your needs.
- Written recommendations prepared by CKSource core developers.

Result of service

- Analysis of CKSource product usage (integration, configuration, features usage, user experience).
- Enumeration of mistakes in current project.
- Objective description of possible enhancements according to customer needs, with pros and cons of each enhancement (required time, effort and resources needed to realize).
- Recommendation of available CKSource solutions able to deliver enhancements.

Stages of service

- Contact between customer and CKSource team is established to get deep knowledge of project.
- Site Audit Manager is assigned.
- Goals of client's project are outlined.
- Audit is performed with focus of customer needs and project goals.
- Report is created with customer cooperation.
- Report is delivered.
- Report summary call is established to review the analysis and recommendations.
